

575 Winterize/Drain

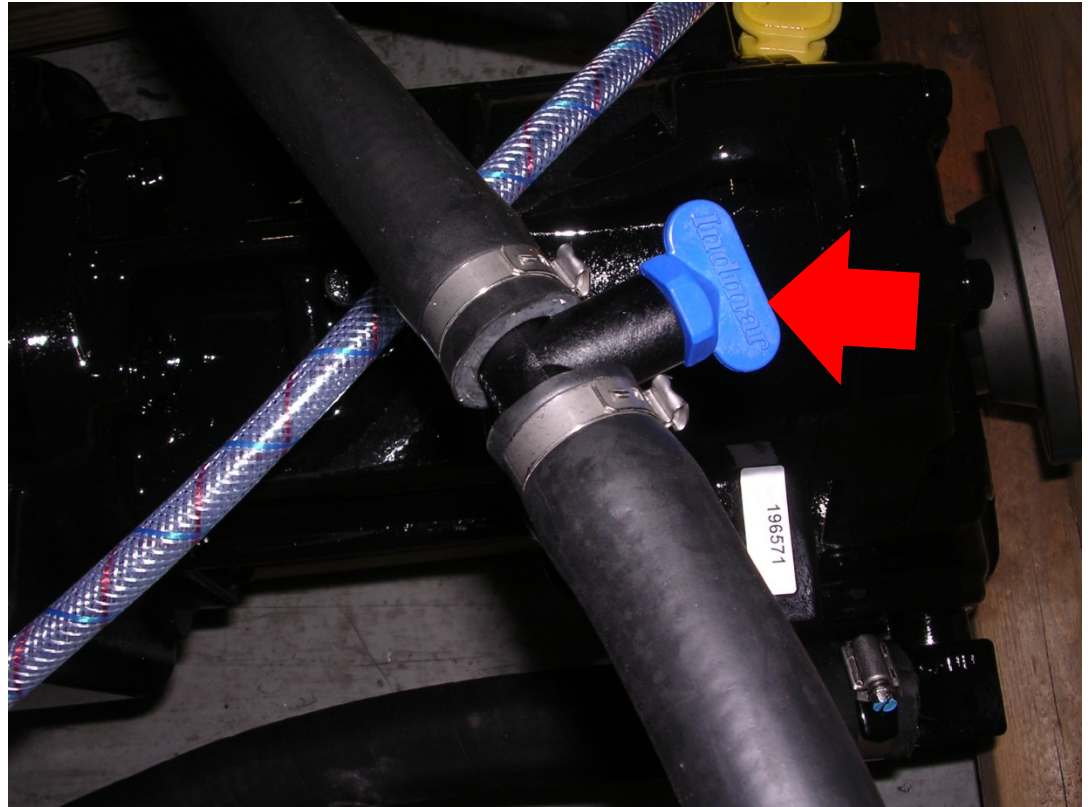

Pull Hose From V-Drive

Pull hose and push into the bilge, This should drain raw water from hoses, transmission cooler and all the way to the inlet side of the raw water pump.

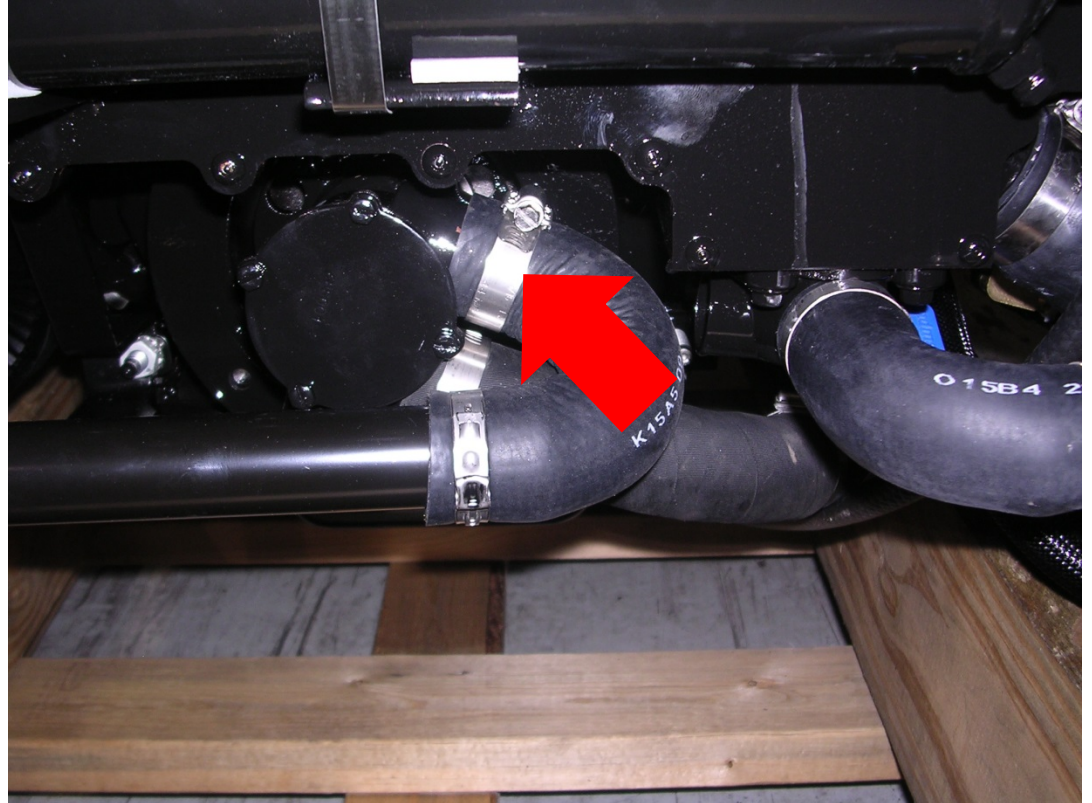

Pull Drain Plug

Pull the drain plug from the T-fitting in the exhaust manifold crossover hose. This will drain the exhaust manifolds and the crossover hose.

Remove Raw Water Outlet Hose

Remove the clamp and the raw water outlet hose to drain the tube and hoses going to the intercooler heat exchanger.

Pull Drain Plug

Pull the blue drain plug. This will drain the engine heat exchanger if there is water in it that didn't drain through the dripless packing hose. Also pull the drain plug from the intercooler heat exchanger to get the water out of the lower portion of the heat exchanger
